

Cargex

For mid and small BIDECS in Ghana

Cargo financed -> stock -> lifting -> cash recovery

Cargex is the operations and cash-control layer between NPA ERDMS and your books. Ops and finance stop reconciling chaos in Excel.

Does not replace NPA ERDMS or GRA ICUMS. Does not run OMC retail stations.

Answer these from one workspace

1. How much can we legally and financially sell today?

Available-to-sell after physical stock, financial hold, and open commitments.

2. Who owes us, and can they lift more?

OMC credit limits, exposure, and blocks before the next order confirms.

3. What did this cargo really cost?

Landed cost in GHS - product, freight, FX, financing, storage - and provisional margin.

4. What volumes are unmatched vs ERDMS / depot?

Import the lifting workbook; exceptions sit in a queue until they match a sales order.

5. What cash is coming in to repay the bank?

Invoiced, collected, and outstanding by cargo - a pack the financier can read.

What you get

- Stock & available-to-sell, including financier hold
- OMC credit control and sales approvals
- Invoices, receipts, aging, and bank repayment
- Cargo cost and margin in GHS / USD
- ERDMS lifting import and reconciliation
- Excel export; Sage and QuickBooks on Professional and Enterprise

Trial	Standard	Professional	Enterprise
Free 30 days	GHS 3,000 / mo	GHS 11,000 / mo	GHS 18,000 / mo
Full product 1 admin	OMC GHS 2,000 8 seats	OMC GHS 5,000 25 seats	OMC GHS 8,500 60 seats

Design partners

Three companies, one live cargo each, 60-90 days of guided setup. Full product. We sit with ops and finance through discharge, liftings, invoice, and bank repayment.
